

Earth Friendly.

- The Rainbow uses Mother Nature's most powerful element, **water**, as the first line of filtration. As a result, no paper bags go into the landfill.
- The Rainbow uses an extended-life HEPA (high efficiency particulate air) filter, which is washable and **reusable**.
- The Rainbow is made of nearly 100% **recyclable** materials.
- The entire Rainbow system is RoHS (the restriction of the use of certain hazardous substances in the electrical and electronic equipment) compliant. This means the product contains **no hazardous waste** materials defined by European standards (more restrictive than U.S. standards) such as lead, cadmium, mercury, hexavalent chromium, polybrominated biphenyl (PBB) and polybrominated diphenyl ether (PBDE) flame retardants.
- While most vacuum cleaners are designed for a three-year product life cycle, the Rainbow is designed for a **lifetime of use** with the switch reluctance motor and robust materials.
- The Rainbow is manufactured in a very **low impact**, near zero emission facility.
- The materials are selected specifically for stability and **ease of recycling**. These include the use of ABS, PET, PE, Steel, Copper and Nylon, to name a few.
- Warranty materials are inspected, analyzed and then **recycled**. This includes shipping materials whenever possible.
- All cleaning and fragrance solutions have been reformulated to be more "earth friendly".

We can all make a difference.
Please recycle
